Q 3 + R 1 5/26/69

C14 + C2 - 568 - two matchings
C14 free 567 / plunger #2.
C14 + C6 - 556 (way off on wrap
C14 + C6 - 561 - matches somewhat not clear.
C14 + C7 - 562 "
C14 + C7 - 563 " diff lighting
C14 + C35 - 564 likely match C14 not on C38
C14 + C38 - 565 almost an exact
C14 + C1 - 566 - some similar, some different

I think an expert should be called to examine this as though he were a defense witness, not because I think some were not fired from the rifle but because I think there is evidence that has considerable use of the weapon between the time the evidence of test samples were made. To my untrained eye & without knowledge of what deviations, if any, are normal from shot to shot, I believe the changes are sufficient magnitude to lend back up my opinion. If the evidence of these exhibits supports this belief, then the rifle has an unexplained history after the exhibit shells were fired, before or after & got into federal hands. This would mean the exhibit casings were fired much earlier than the assassination - earlier in time of shooting rather than coincident in time.
